Basic Functions The most basic way to create objects in AutoCAD is to draw a line and then rotate, move, extend, and/or align that line. Lines can be straight or curved. You can type letters or numbers in the line's space, or you can enter a drawing object's dimensions and other data, such as text. Line and arc data can be created in layers, and objects can be grouped in layer sublayers. You can then group objects, delete objects, or edit the properties of objects and groups. You can also resize and move objects. In addition, you can insert text, create new text boxes, create new graphics layers, create new sublayers, and edit the properties of objects. You can also create new objects in AutoCAD by selecting the drawing area and then drawing lines, arcs, or Bézier curves. You can also use the drawing area and the palettes to select and manipulate drawing objects (such as text boxes, polyline and polygon, shapes, and solids) and attributes of objects (such as dimensions, text, and line styles). Drawing tools include the line, arc, curve, circle, ellipse, rectangle, polyline, polygon, and circle. The options that are available when you draw and manipulate lines and shapes are covered in more detail in the AutoCAD Drawing Basics article. You can manipulate text using the keyboard, mouse, or toolbars. You can also edit properties of text, such as font and font style, color, and size. You can also select text, cut, copy, and paste it to and from other text boxes, and you can move and resize it. You can also type text directly in the drawing area. You can print your drawings and manage them from within AutoCAD. You can also export your drawings as PDF and DWG file formats. You can also view and edit the properties of your drawings, and you can share them over the Internet. You can also work with parametric design applications, such as Inventor or AutoCAD LT. AutoCAD supports DXF files and DWG files. It has export options for DXF and DWG files, and you can open.dxf and.dwg files in AutoCAD. AutoCAD also supports AutoLISP, enabling you to write your own macros and scripts, and it can be extended using the

The EZ-2s is designed to save time and are self-attaching. Once the bowline is pulled through the eyes, the EZ-2s snap on, stabilizing the bowline, reef knot, or clove hitch that is connected to the bowline, ensuring that the bowline or reef knot remains taught. Simply, you don’t have to fuss with trying to tie the bowline, reef knot, or clove hitch, the EZ-2s come ready to go. Like all the other Fred Olson products, the EZ-2s are great value for money.Q: System.Exception - Property or indexer cannot be assigned to - Make a certain property read-only I have the following method.
