What's New In?

What is new in AutoCAD 2023? Dynamic Linking: Use Dynamic Linking to have AutoCAD automatically jump to an external file when you reach a particular location on screen. Dynamic Linking has been greatly enhanced, as it now includes many new features: Multiline You can now link multiple paragraphs, lines, markers, blocks, notes, text frames, and so on, to each other, in addition to the multiple layers that are already supported. This means that you can now create a dynamic table of contents ("What's new in AutoCAD 2023") by dynamically linking tables, figures, text frames, and more, from one to another. Navigate with Linked Object Pointers: Use the "Go to linked object pointer" command, which now not only supports linked layers ("What's new in AutoCAD 2023"), but also multiple linked objects ("What's new in AutoCAD 2023"). A new Navigate to linked object pointer submenu lets you jump to the specific object with a link, or jump to the linked object's parent layer, or jump to the linked object's parent layer's parent layer, and so on. Linked Object Pointers and QuickNav: Use QuickNav to make dialog boxes and buttons easier to use. You can now easily get to objects that are linked, or linked to the QuickNav frame. Simply use the "Go to linked object pointer" command to quickly navigate between two linked objects. Copy/Paste Use the "Copy" and "Paste" commands to copy and paste objects, markers, layers, settings, components, and so on. You can now copy components, and objects that are set with constraints, to Clipboard Lists for easy pasting. QuickObjs: You can now quickly access linked objects in your drawing with QuickObjs. Use the "Go to linked object pointer" command to access a linked object. Use the "Go to QuickObjs" command to open a QuickObjs menu of all the linked objects that are currently visible. You can now use QuickObjs to: Control the placement of objects linked to QuickObjs ("What
