manufacturing of integrated circuits, various fabrication and process steps are used to form electronic devices in silicon substrate. A typical integrated circuit manufacturing process involves deposition and patterning of various layers on the substrate. For example, an integrated circuit includes a polysilicon gate layer that is formed over a gate dielectric layer. By exposing the polysilicon gate layer to an anisotropic etch, the gate layer can be removed in a substantially perpendicular

direction to the substrate surface. This step is typically performed after deposition of the polysilicon layer on the gate dielectric layer. Q: Java - Multiple files in an array, not appending I have an assignment in which I must read all the files in a folder. I must then calculate the average value of each file. I cannot figure out why my code is only

appending the last file of the folder to my output variable. I have also included the output variable in an array called FinalOutput. import java.io.*; import java.util.*; import java.io.File; public class FileRead { public static void main(String[] args) throws Exception { // Create an array to hold a few inputs FileInput[] allFiles = new FileInput[20]; int i = 0; // Create an array to hold the file names String[] list = new String[20]; // Open the folder File dir = new File("C:\\Users\\lincoln\\Desktop\\C-PROJECT

S\\C-PROJECTS\\src\\Ch_Files\"); File[] files = dir.listFiles(); for (int j = 0; j
