It's a classic game! Snake is too well known to disappear! These days, I decided to create an indie game based on Snake... Meaning, I wanted to build a game that could be really tough, but still accessible... ...I'm sure you'll like it! published:01 Mar 2016 views:20337 The dark time of human history is here! The existence of wolves is under threat. We show you the latest developments in our fight against them! published:22 Jun 2018 views:6523 Baby storks are fly into life on their own! Do animals get better at doing things every day? Do animals get better at things because they

have a lot of experiences of doing that thing? What causes an animal to develop a skill? How much work does it take to get better at something? Is it harder or easier to get good at something once you have a chance to work at it? What would happen if hens could become hens? Would they still lay eggs? What if tigers were actually born with stripes. What would happen to the other big cats? / Wayne Hammock, Director, Pet Connection Animal Shelter: "In some way, we really do have all the animals in our care born with a striped or mottled pattern and we -- get a sense that they are getting ready to hunt so they kind of emote and as they grow, they're working on honing that hunting skill. So, they're always born with that instinct- this instinct to hunt and that's actually inherited. They don't really, they don't really acquire it; it's just the way they're made. All the rest they get by working at it from a young age or getting a lot of practice. So, not only does the short-haired animal have to be quick and quick thinking but they also have to have good hearing. We see animals that are -- you could think of them as prey and not actually prey animals but animals that you would be safer with than a dog or cat because they're so quick to let you know if there's anything in their environment that might be a threat. So, even though they're small animals they're very aware of what's going on." And while we don't

Abstract: Apathic Quarterly of Rhinitis 2014 Number 8, pages 24-25. Introduction: Complicated rhinitis (Rhinitis Clarata) is one of the most common reasons for suffering from nasal congestion. It is well known in the medical community that those who suffer from rhinitis Clarata are almost always sensitive to pollen proteins. Generally, the symptoms of Rhinitis Clarata include heavy sneezing, watery nasal discharge, foul tastes, dryness of nasal mucosa, feelings of the throat constricting, dry throat, eyelid and eye itching and mild facial pressure. It is said that the total amount of rhinitis Clarata in the world are unknown. But it is clearly clear that as one of the major nasal problems, it is very common in day time. In many cases there are huge amounts of sticky phlegm in the inside of the nose and it causes enormous problems to the quality of life. Clinical symptoms: Sometimes the perceived symptoms of the disease are not easily found. The reason for this may be because the symptoms may not be noticeable at the early stages of the disease progression. This can lead to underestimation of the effects of the disease on the patient health. The particular questionnaires most often used to evaluate the severity of the complicated rhinitis are the Subjective Rhinoconjunctivitis Quality of Life Questionnaire and the Rhinoscopy-Inferno Scale. The instruments for evaluation of the disease and evaluation of its quality of life act as objects of

the research. Analysis: This is a detailed descriptive study on a clinical population of 100 (53 male and 47 female) patients suffering from complicated rhinitis for one year. They were informed about the research and the instruments were sent to them. However, as we understood, five patients did not respond to some questions about rhinitis following the given instructions. So, the study included 95 patients. This research has been conducted in order to find out the importance of pollen consumption in complicated rhinitis. The aim of the study is to find out the seriousness of the difficulties that these patients face on a daily basis and to evaluate the effectiveness of pollen immunotherapy in the treatment of complicated rhinitis. Findings: Many subjects stated that the reason
