Guest Your name as shown on the guestbook will be presented.In order to effectively serve their members' interests, the United States (US) has been subjected to military and intelligence operations that will be revealed in a series of documents to be released between now and the end of the year. The High Court of Kyrgyzstan ruled on Wednesday that all processes related to the case of the adopted Russian-born Tadzhiyev Alexander be transferred to the European Court for Human Rights in Strasbourg. His friends and family accuse the government of involvement in the death of the lawyer, and over four months, the Interior Ministry searched his office, including his laptop and smartphone, while the police deleted evidence.Fate and transport of <sup>3</sup>H-vitamin D<sub>3</sub>-labeled amorphous CaCO<sub>3</sub> in the avian cecum. The fate of <sup>3</sup>H-vitamin D<sub>3</sub>-labeled amorphous calcium carbonate (CaCO<sub>3</sub>) is studied in the cecum of the adult pheasant. The label is actively introduced by injections of <sup>3</sup>H-vitamin D<sub>3</sub> and <sup>32</sup>P-vitamin A in the same solution. A considerable portion of this label is left in the intestinal lumen and only one fifth is excreted in the first 8 h. About one sixth of this radioactivity is adherent to the intestinal wall, and most of this radioactivity has become incorporated into the CaCO<sub>3</sub>, indicating that the CaCO<sub>3</sub> microparticles are the major sites for phosphate storage in the small intestine. Virtually all of the radioactivity that is present in the intestinal lumen at the time of the vitamin D<sub>3</sub> injection becomes associated with the portion of CaCO<sub>3</sub> that makes up the deposit. This result indicates that the bulk of the divalent cations (Ca<sup>2+</sup>) and phosphate that enter the c
