as co-manager and Scotia Investment Managers as manager. In addition to BFTI Capital's experience, the specialist US-based manager Scotia Investment Managers has gained a reputation as one of the best fund of funds managers in North America. With BFTI Capital's first Canadian fund, BFTI continues its pursuit of developing new investment solutions to meet the evolving investment needs of plan sponsors. "The launch of the BFTF is a significant step forward for the Bright Future brand, and our new dedicated line of funds will serve as an attractive investment option for Canadian savers," said Jason Galbreund, managing director for the Bright Future brand. "There are great technologies, companies, and innovations emerging out of Canada. The BFTF focuses on these technologies and select emerging companies, and I believe our global view will allow the fund to be well suited for plan sponsors, even those with investments in the United States. "The fund seeks to identify, invest in, and measure the value of a broad range of innovative technologies, companies and companies with software, data and other innovations. It places a premium on companies with strong management teams and sustainable business models that demonstrate the ability to manage risk and deliver on their stated objectives." The BFTF has a \$500 million North American asset base, and is limited to Canadian-based securities. It will invest 100 percent of its assets in either Canadian or Canadian domestic securities. "Our expertise lies in the ability to provide top-ranked and widely diversified portfolio management," said Richard S. Watson, the fund's general partner. "At the same

management, . Levin R.I., and Rubin
D.S., .
Statistics for management, . This invention
relates to a permanent magnet structure of a spindle motor of
an axial gap type, and more particularly to a structure of the
permanent magnet structure having a plurality of magnets
securely mounted on a rotating shaft, such that a reliable and
secure bonding of the magnets to the shaft is attainable.
Conventionally, there are spindle motors each having a
permanent magnet structure such as a ring-shaped yoke
supported on a rotating shaft, a plurality of permanent
magnets arranged on the inner surface of the yoke in an axial
direction, and a stator provided with a stator core and a coil in
which stator coil is wound, said coil being arranged in such a
manner as to make radial gaps to the magnets. With such a
permanent magnet structure, a rotation force is produced by
magnetic attraction between the permanent magnet structure
and the coil on the stator core which is a non-magnetic
member. In order to improve the efficiency of the motor, the
permanent magnet structure is usually mounted on the rotor
in such a manner that the magnets are supported to be
inclined, i.e., so as to have an inclination to an axis of the
rotor. With the conventional arrangement as mentioned above,

it is very difficult to support the plurality of magnets with high precision and to secure the bonding therebetween.

Q: Omitting Unused Arguments in a Function Call I'd like to omit one argument in a function call. Something like:

`say_readline($readline_name)` If a function call takes more arguments that will be passed by reference, it may not be possible to omit a parameter that is only referenced by name. I

realize that: `say_readline($readline_name, $filehandle)` is probably what I want, but I'd like to know if there is a way to do the previous. A: Not reliably; functions don't alter the values of parameters passed to them via reference. It's more reliable

to pass an array of the arguments to the function. The array elements can be populated based on function arguments. For example: `sub say_readline { my($`
