Docker is an open platform for developers and sysadmins to build, ship, and run applications at scale. Docker enables app developers to write once and run anywhere. They simply build and ship their application once, and it can be run on any platform (including Windows, Mac, and Linux) using a familiar Dockerfile. Without the need to install and manage a complex technology stack, developers and sysadmins can build and ship more rapidly. Most containers use Linux kernel features called cgroups and namespaces to limit resources, set up processes, and isolate applications and data. Cgroups enable applications to be distributed across many physical machines while still offering shared services. Namespaces limit the connections that applications have to the rest of the system and the networking subsystem. Containers allow the

1/3

system to share the Linux kernel and each application can manage its own process and device trees. Containers are also: Docker has several products: a product called Docker Enterprise Edition (EE) that offers advanced features for managing containers and monitoring and troubleshooting applications; the Docker open source operating system for Docker Server; and the Docker development tools for building and running applications on any platform. Product Overview Docker Desktop provides a complete, end-to-end experience for developers and sysadmins to build, ship, and run containers with a familiar developer work-flow. With Docker Desktop, you can: Build images and ship containers Manage and monitor containers Run containers Intuitive navigation in a containerized software developer work-flow An integrated multi-platform container repository and deployment service A Docker Hub registry that organizes containers and Docker images Docker Enterprise Edition Docker EE is an enterprise-grade operating system for managing Docker containers. Docker EE addresses the needs of businesses and organizations with distributed applications, microservices architecture, and mobile and containerized applications. The Docker EE product provides security features to allow secure access to data and applications in a cloud or hybrid cloud. Occ13bf012
