AutoCAD 2019 is the first release of AutoCAD to use the brand-new Architecture Framework for

developing the application. The Architecture Framework is designed to dramatically reduce the complexity of development and maintenance, with new features such as the Application Object Model and a Visual Block Interface that lets developers create new visual elements without writing code. In addition to updates to the core application, AutoCAD 2019 also features the following:

Architecture Framework: The Architecture Framework is a new set of components designed to deliver an easy-to-use and scalable development and maintenance environment for AutoCAD that will help developers build powerful, feature-rich applications with ease.
