You can getÂ .Q: With a class A object, how do I obtain a list of the private parts of that object? So in the example below, I have a class object by the name of "obj". //props example let obj={ private: let's make theses 'tea cups' the right size let's make these 'tea cups' the right size } //usage example let myObject= new MyClass({ 'tea cups':5 }) This works fine for the above example. However, the class MyClass has two values that I'd like to hold. I've given them the 'private' access modifier so that they will not be publicly accessible. In my constructor, I would like to first check to see if the object is empty. If it's empty, I'd like to set the value of the private property to the value 5. Otherwise, I'd like to do nothing. The problem is, I can't seem to access the "tea cups" property to get its value to check it, because it's private. Any ideas on how to do this? A: My mistake, I was able to get it to work by calling the function that gets used to retrieve the value and then appending the data I need to. let privateCheck= obj.getPrivate; //call the function that gets 'getPrivate' let teaCupValue= privateCheck("tea cups"); Plant alkaloid, indole alkaloids, and their derivatives are important natural products, and the discovery of their biosynthetic pathways may lead to the generation of new chemotherapeutic drugs with novel mode of action. We have developed a novel strategy to address these problems by combining the powerful genetic and biochemical techniques available from budding and fern plants. Our immediate goal is to investigate the biosynthetic pathways of two alkaloids derived from the serpentine motifs, desmethoxy tetrahydrocolombamine and desmethyltetrahydrocolombamine 6d1f23a050
