the great feature of pes 2017 is the ability to play on tv. it works like you would expect on a tv. since there are plays that show the players and the rest of the game the tv ui is as close as possible to real life on tv. there are changes in between plays and the like, but nothing too bad. it also means you can play on a tv, or monitor, in the same way as on a console. it's really good if you are looking for something to take with you on road trips. the biggest change this year is that we are able to choose which league we play and more realistic controls. we also have new features such as the multi-stage mode and player analysis with our own stats. from the 2.5 update to the experimental locomotion in the game, this new iteration of pes changes dramatically. and as promised by the producer, the game will be built on a brand-new engine. it will be closer to what is seen on television and not only when it comes to the graphics. not only will it be recognizable in the gameplay with the player models, but also the smart use of the new tv cameras as seen in the real game. "if you look back on those old pes titles, the game was never built on the same graphics engine as the console game. we say that pes will be closest to the real game!", the producer says. and such a promise is made possible by the new pes 2018. the producer promises that the game will still be the same great pro evolution soccer, but that the team should have more consoles than pc, that has been the condition of the game since the beginning. now let's be careful not to get confused by the different versions because on the ps4 and xbox versions, pro evolution soccer is named fifa. from the fifa 19 release date , you can see that the base game will be available on all platforms soon. 5ec8ef588b
