I think I've had just about enough of this. I upgraded my copy of Photoshop CS6 to version CS6.1. It is the first version of CS since version CS4; and if it has to get stuck on version 20 every five years, then so be it. It's too much work; but I give it the thumbs up. I will be updating my review in near future as I try to use it as my primary workhorse for awhile, and offer up critical commentary. I'll try to view things in the long term, noting how the software evolves, and changes in general. I am impressed. The update makes a lot of improvements, and some things as loreal later (see "Eliminates false positives.") This update is not for the beginner, but if you know what you are doing, you will find it is an easy and powerful program. The programs interface is very intuitive, and although there are fewer options than there used to be, the interface is very nice - especially for the professional photographer. I am glad that they finally have released updates for the Adobe Creative Suite. Previously it was a pain in the back to get updates, but now that they have them, there's really no reason to. The only reason I'm using Windows OS, is due to Adobe's software and Adobe is my favorite software maker. I'm not paying for Adobe's Windows OS, nor do I care for it - I just want to see the updates. As much as I feel for Windows and their need to load plugins - I still can't stand GIMP or Photoshop Lite. I will be happy to see the next release of the Adobe Creative Suite, and look forward to it.

Neural Filters are a new workspace in Photoshop designed to appeal to visual artists. It's powered by Adobe Sensei, a cognitive AI that uses machine learning and neural networks to predict the effects and possibilities for tasks. You can apply a filter and see how the filter works before diving in—simply drop the filter onto an image and the Sensei engine analyzes the content of the image. The filter analyses the subject and the context of the photo and generates a list of suggested modifications. You can choose the best result for your media.
