## What's New In?

The .NET Framework Setup Verification Utility is an application that verifies the integrity of the .NET Framework. It checks the existence and the correct functioning of the .NET Framework files and folders, as well as registry keys. It can also ensure the compatibility of applications requiring the .NET Framework by performing a quick analysis. The software has been designed to check .NET Framework 1.0, 1.1 and .NET Framework 1.1 SP1. The application also verifies .NET Framework 4 and 4.5. .NET Framework Version Detection: While the .NET Framework Setup Verification Utility can detect all .NET Framework versions starting with .NET Framework 1.0 and its updates - 1.1 and 1.1 SP1, the supported iterations are .NET Framework 4 and 4.5. .NET Framework Version Verification: This software checks the existence and the correct functioning of the .NET Framework files and folders, as well as registry keys. The output of the program also lists which specific .NET Framework version is installed on the system. It uses the following file types to identify the particular .NET Framework version: -- .NET Framework Setup Files .NET Framework Setup Files: This folder includes the .NET Framework installation media and the configuration files that are used during the installation process. .NET Framework Data Files .NET Framework Data Files: The .NET Framework Data Files folder is where all the files that are used by the .NET Framework are kept. .NET Framework applications are dependent on these files to store their data. If a specific .NET Framework file is missing or corrupt, then the application will not be able to properly work. .NET Framework Components .NET Framework Components: The .NET Framework Components folder contains all the .NET Framework components. It provides applications with all the capabilities they require to use the .NET Framework. For example, the Windows Form Designer tool, the XML Parser, the Language Provider, the Performance and Security Analyzers, the Reflection and Serialization Providers, the Multithreaded

Programming Library, the P/Invoke Support Library and so on. The .NET Framework folder also contains the files that are not specific to any particular .NET Framework version. For instance, the folder also includes the .NET Framework Binaries folder. This folder is empty and cannot be checked by the .NET Framework Setup Verification Utility. You can also find the .NET Framework Help folder in the .NET Framework folder. This folder contains all the help files that .NET Framework applications use during their operation. The .NET Framework Setup Verification Utility lists only the files that are specific to a particular .NET Framework version. Net Framework Environment Variables Net Framework Environment Variables: A .NET Framework configuration file, the NETFX\_COREVERSION environment variable, contains the numeric version of the .NET Framework that is used. This environment variable cannot

## **System Requirements For .NET Framework Setup Verification Utility:**

Minimum: OS: Windows 7 or higher Processor: Dual Core Processor  
Memory: 2 GB RAM Graphics: NVIDIA® Geforce GTX 560 or AMD® Radeon HD 7870 or higher DirectX: Version 11 Storage: 6 GB available space Additional Notes: Note that for some games, like "Duke Nukem Forever" or "Resident Evil 4" we recommend a NVIDIA GeForce GTX 660 or higher, or AMD Radeon R9 290 or higher to achieve the best performance. Keyboard:
