While Lightroom 5 can be used to create web graphics and other effects, Photoshop is your best option for these projects. You can use Lightroom for photo editing. But, if you plan on doing any web design, photography or video editing, Adobe Photoshop CC is the better choice. Adobe has again done an excellent job with Lightroom. Photoshop does not have a new interface or new features. However, Photoshop is still strong as ever. It contains all the tools for editing photos. There are some issues like missing and misnamed features. It is the best image editing tool on the market. In the new version of Lightroom, Adobe made a worthwhile change to the raw format. It stated that it allowed multiple layers to be processed inline by eliminating the need to convert multiple files to a single one and then opening the file for quick edits. Lightroom CC is also more than just a photo editing tool. It actually offers a complete suite of features that includes design and video editing, creating JPEG photos for use on websites, even creating accessible websites for people with special needs. The application itself comes built in with many helpful features, one of which is a built-in darkroom with Adobe Camera Raw, and a standalone Photoshop application for more advanced needs. The Windows version of Adobe Photoshop Sketch is nearly identical to the Mac version, yet the differences often result in a much better editing experience. For example, the Windows version handles Opacity much better. Most Mac apps ignore your Input Layer, yet Photoshop Sketch takes it into account for workflow automation and changes to opacity. I know of several online tutorial sites where Photoshop Sketch is compared to the Mac version.
