Further, the computer's ability to analyze and understand your work enhances the features of the app. For example, when you edit an image in the browser, the computer will "listen" to the context of your editing. If you tell the computer to change the background, the app will dynamically adopt the background colour while the rest stays where it is. If you tell the computer to filter a subject by "smiling", it will do so. This new Photoshop feature enables you to edit a project online, simply by dragging and dropping files from a browser on to a shared canvas. The ability to work with multiple colleagues on the same document comes from our collaboration tools, Spark, Adobe Experience Cloud (AEC), Experience Design System (XDS) and other extensions of the Creative Cloud pipeline. The beta release for Share for Review is now available. Share for Review will automatically log you into your Apple Account, so that any other people with access to that same account can also view the files that you've been editing. This makes it much easier to collaborate with others from the same computer — not just people with the same organisation. The ability to log in with a Mac password is coming soon. The new Adobe Guided Selection feature in Photoshop will help you make the best selections for your artwork by providing guidance when you are editing. It constantly evaluates the remaining shapes in your artwork to provide helpful targeting suggestions. Adobe donated technology to the Smithsonian's Morphology Lab to enable precise 3D Morphology, helping the team at the Smithsonian study and 'reverse engineer' natural morphologies. Adobe has also been working with the Open Images initiative to provide support for higher-fidelity morphologies in Adobe's products. During the beta phase we're testing new features and working

with the Morphology team in the Smithsonian to improve the selection process.
