Cookeyah Free

----- DESCRIPTION ----- Keymacro is a database replacement and password manager application that enables you to store your important data in an encrypted database and retrieve it later using strong encryption algorithms. It can be used to store usernames, passwords, credit card numbers and any other type of information that you need to store. You can also use it to store web-site logins and credit card information. In addition to the main database function, you can use it to enter and store information such as serial numbers, phone numbers, passwords, emails, text messages, bank account numbers, etc. The information is stored in the encrypted database using strong encryption algorithms. The application includes a function that allows you to setup an auto-login system, so that you can easily access your stored information. When you create a new entry or update an existing one, the application automatically generates a unique password that is based on the information that you enter and is encrypted using the Strong AES encryption algorithm. The application supports login using a password (PIN code) or with a username/password combination. Your accounts will be stored in your Keymacro database and can be retrieved later in the 'Keymacro History' area. You can choose to access your data using the password, username or both. On the other hand, you can use the 'Click to login' function. When you click on it, the application will use the information that you provided to you for the current session and automatically log in to the website or mobile application. You can use your username or password to access your accounts and retrieve your information. You can also use the application to set up a 'Keymacro Domain' so that you can use it on multiple devices (such as your desktop and laptop). In that case, when you log in on a new device, the application will automatically authenticate you. You can use the 'Keymacro History' function to view the information that you stored in the database. You can print your entries, export them in the CSV format, export them in the TXT format, and export them in the HTML format. ----- FEATURES ----- - Add your important information to a database. - Generate strong passwords (password, username and PIN codes). - Setup an auto-login system so that you can use it on multiple devices. - Store your data on up to 16 devices. - Secure access to your database. - Configure your Keymacro domain so that you 2edc1e01e8

Cookeyah Product Key Full PC/Windows

- Speeds up the process of browsing the database, especially when you need to enter multiple passwords at the same time. - Allows you to choose between different engines of the biometric authentication. - Multilingual support: English, French, German, Spanish, Russian, Greek and Czech languages. - Supports Dropbox and Google Drive. - Supports Linux and Windows OS. - Runs on the Java platform, without using the.NET framework. - Works on any Android phone with voice recognition. - Supports every Android phone from every vendor, including low-end phones. - Store passwords locally, so you do not need to log on to the web site every time you want to access your password database. - Speeds up the process of browsing the database, especially when you need to enter multiple passwords at the same time. - Allows you to choose between different engines of the biometric authentication. - Multilingual support: English, French, German, Spanish, Russian, Greek and Czech languages. - Supports Dropbox and Google Drive. - Supports Linux and Windows OS. - Runs on the Java platform, without using the.NET framework. - Supports every Android phone from every vendor, including low-end phones. - Store passwords locally, so you do not need to log on to the web site every time you want to access your password database. - Speeds up the process of browsing the database, especially when you need to enter multiple passwords at the same time. - Allows you to choose between different engines of the biometric authentication. - Multilingual support: English, French, German, Spanish, Russian, Greek and Czech languages. - Supports Dropbox and Google Drive. - Supports Linux and Windows OS. - Runs on the Java platform, without using the.NET framework. - Supports every Android phone from every vendor, including low-end phones. - Store passwords locally, so you do not need to log on to the web site every time you want to access your password database. - Speeds up the process of browsing the database, especially when you need to enter multiple passwords at the same time. - Allows you to choose between different engines of the biometric authentication. - Multilingual support: English, French, German, Spanish, Russian, Greek and Czech languages. - Supports Dropbox and Google Drive. - Supports Linux and Windows OS. - Runs on the Java platform, without using the.NET framework. -
