What's New in the DXF Exporter DLL?

DXF Export DLL is a tool designed for programmers in languages which support DLL technology. New version supports hatches. DXF Export DLL translates Windows metafiles to DXF files. Two export modes - simple and 0.01mm mode. Documentation and demo versions are available for MS Visual Basic, MS Visual C++, Borland Delphi and Borland C++Builder. Note: Compatible with VC++ Possible to use with C# / VB.NET / J# / VB / Delphi / C++ Builder Facing complex application requirements, V1.0f of this component (DxlExport.dll) offers a simple, fast and flexible DXF exporter component based on VSPDxl.exe tool. The DxlExport.dll provides an easy-to-use interface for generating DXF files from vector and/or bitmap images in Microsoft Windows application. It can be used as a library in your own application. VSPDxl.exe is a free DXF (Drawing Exchange Format) viewer and editor. VSPDxl.exe is the successor of the now retired tool VSPDxl (version 1.0f) and it is available as freeware for both Linux and Microsoft Windows. VSPDxl can handle the binary, source, and version 3 DXF files, with the ability to read and write DXF files using all popular file formats for vector and bitmap graphics, and can edit text with multiple fonts and save the edited file with editable text using various font formats. It also has a built-in search engine with the ability to search in several file formats. VSPDxl.exe is available at The latest release (version 1.0f, Windows only) is available at It's possible to use VSPDxl.exe as a library in own projects, but there are some limitations. VSPDxl.exe does not provide a native Windows driver, it uses libstdc++ by default to load dll's on Windows. If you're going to use this in a C or C++ project, make sure that the libstdc++ library is included in the project. VSPDxl.exe is based on the libstdc++ libraries. This libs is also used by gtkdxfviewer (see below). It's the one you need to be installed for gtkdxfviewer to work. If you need to open existing files you need to install the corresponding version of the libstdc++. New library is built from vspdxfileviewer
