With the motion graphics feature, images can be easily layered together and edited much like in other popular digital editing programs like Adobe's After Effects. One interesting thing is that this feature is in the form of a timeline, so you can use markers to trim or change the video as needed. Other innovations announced today at Adobe MAX include:

- SketchUp Shape Padding creates separate layers of the project so that you can add stuff to the right side of the shape. In minutes, hundreds of people can author pages of content in a single design project.
- Adobe ImageReady One-Click App Developer gives designers more access to the tools they need, including more than 50 Layers, a Content-Aware Fill and powerful masking features. As a result, designers are able to create very complex sites and web apps in one click without significant effort.
- Adobe Sensei – Powered One-click Actions. Also announced at MAX, Adobe Sensei – Powered One-click Actions has more than a dozen new actions including one-click image adjustments, content-aware fill, and useful presets.
- Photoshop – Remove Background. With the new tool, Photoshop users can simplify background removal by choosing a color to be a background and then clicking on it to remove the background from images. A new area is then automatically created to fill the area with the color of the background, making it easy to select the area when replacing the background in a browser, in mobile or on a tablet.
- Photoshop – Edited on the Web. Finally, Photoshop users can edit their pictures directly in Photoshop CC on the web, creating new edits in the browser and saving images directly on devices.

Paint Shop Pro is a powerful graphics editor for anyone who wants to create art, brochures, and editorial print work. But it was never designed to be a multitasking tool, and it's very difficult to manage a large amount of data. Adobe Photoshop is a complete tool that promotes multitasking, but it's not as flexible as Paint Shop Pro. Many people use Photoshop as a replacement for Paint Shop Pro. Photoshop's powerful tools and features are fantastic, but the program can be a bit overwhelming. It doesn't feature extensive print support and lacks the integration with other Adobe products that made the Paint Shop Pro the standard of the graphic arts industry for years. Unlike Photoshop, Paint Shop Pro does not offer an extensive selection of image-editing tools. It's a simple editor. To achieve the same level of quality as Photoshop, you need a paid subscription to Adobe Lightroom. A subscription provides unlimited storage and access to add unlimited raw files. Paint Shop Pro also lacks the ability to save PSD files. It's possible to save files in some formats, including DWG, at the cost of limited support for graphics used in other programs. These functional shortcomings in Paint Shop Pro make it less of a versatile tool than Photoshop. Buttonsbar is the most prominent feature of a

Photoshop, and so is the Layers pallette. The Layers pallette allows layers to be grouped, moved, duplicated or deleted it goes without saying that every layer you create in Photoshop is a palette item, then the Layers palette is visible in your Photoshop workspace. The buttonsbar of Adobe Photo Kill is the toolbar at the top of the application window. From there you can Edit and Find to edit and manipulate the photo, then you can choose to view the image, then you can zoom in or zoom out, and from there you can adjust the brightness and contrast. Some people say that adding videos/pictures together on a presentation is not a good idea and maybe that's true for some people but at the time of writing this post, I've seen (and done) some great presentations with videos and pictures, so it depends on your topic and what you actually want to say and do.
